

Structure Inspections

Multiple Work Orders - Culvert Inspections

Project Location: Port St. Lucie and Fort Pierce, Florida

Underwater Engineering Services, Inc. (UESI) dive teams have completed numerous culvert inspections in the Fort Pierce area. The dive teams were led by a Florida Certified Bridge Inspector, and included up to five team members for penetration dives. The inspectors performed general measurements and identified various deficiencies with the culverts, such as bulges, depressions, open joints, sediment washout, corrosion, scour, cracks, spalls and alignment issues. UESI performed visual and tactile inspections utilizing live video feed and recording of the inspection. An inspection report and a DVD of the inspection were provided for each culvert.

Completion Date: On-going

UESI Job Number: COM2013203, COM2013208, COM2013219, COM2013221, COM2013233, COM2013243
