
Wastewater Treatment Plant Ocean Outfall

Erosion Control - Articulating Block Mats

Project Location: Hollywood, Florida

Work consisted of repair and cover of selected underwater sections of a wastewater treatment plant ocean outfall. Dive crews placed No. 57 stone on top of the outfall pipe and a geotextile layer on top of the stone. UESI then placed 22,000 square feet of articulating block mats and transplanted certain stony coral colonies. The work plan included successfully working through environmentally-sensitive areas including coral. The work was performed ensuring continued operation and performance of the existing wastewater facilities.

UESI's early-completion performance resulted in the award of additional work.

Completion Date: August 2002
UESI Job Number: COM2002224
